Phones

Thuraya offers uninterrupted, seamless, border-to-border satellite telecommunications services to more than 100 nations in Europe, North and Central Asia, the Middle East, Central Asia and South Asia.

Thuraya's handheld phone integrates satellite, GSM and GPS and offers a wide range of services including voice, data, fax, short messaging and location determination. Thuraya also offers satellite payphones and other rural telephony solutions in addition to indoor usage accessories.

Your Thuraya handheld phone opens up a world of roaming. Thuraya enables you to access local GSM networks and link to satellite mode outside of that service area. If you are in Thuraya's coverage area you can make a call to, and receive a call from, anywhere in the world. If you are outside Thuraya's coverage area you may be able to use Thuraya on GSM mode in areas with compatible standards.

Thuraya's wide range of services enhances service options for subscribers already served through land-based operators, while opening up access for those living outside these networks.

The mobile satellite telecommunications services offered by Thuraya include the following:

- Voice: GSM quality
- Fax: ITU-T G3 at 9.6 kbps
- Data: at 9.6 kbps
- Messaging: GSM short message service
- Location determination: within 100 meters accuracy (Global Positioning System)
